

The AETOS Cluster will attend the AUVSI XPONENTIAL 2018

Main event for the Remotely Piloted Aircraft Systems in the US, the **AUVSI XPONENTIAL 2018**, will welcome the AETOS cluster.

Nouvelle-Aquitaine was the first region in France convinced of the potential of a drone sector, creating the AETOS cluster in 2010. Within a few years thanks to collaboration between public authorities, innovative start-ups and SMEs, industrial players and universities, new solutions have been proposed in this fast-growing sector, with countless businesses using drones daily.

AETOS gathers a dynamic network of 100 industrial companies, laboratories, researchers, covering the whole RPAS value chain.

Innovation in this sector has become a key differentiator in attracting new business. The region has an ecosystem capable of designing, developing and experimenting drone services in real condition.

So, in partnership with the AETOS cluster, the region launched Drone City to place the city at the heart of these innovative drone practices and to make Nouvelle-Aquitaine the biggest European center of 'Open Sky' drone experiments. Several selected projects will be presented on AETOS booth.

Please come and meet us at booth # 3407. Contact: contact@aetos-aquitaine.fr
